

DOREMI LABS INC. WINS TECHNOLOGY PICK HIT AWARD AT NAB

DIMENSION-3D Format Converter Box Wows the Show Floor

NAB Las Vegas, April, 2010 - Doremi Labs is pleased to announce its latest technology nod awarded by Broadcast Engineering Magazine at last week's NAB 2010. The "Technology Pick Hit" was awarded to Doremi's latest 3D innovation, the Dimension-3D Format Converter.

The Dimension 3D is a highly versatile 3D format converter allowing the conversion of any standard 3D format to another including changing of the frame rate. Standard video formats are supported from high definition to 2K. Dimension-3D accepts both dual and single stream as well as HDMI inputs and outputs.

The versatility of Dimension 3D makes it suitable to fit into virtually all stereoscopic workflows.

Technology Pick Hits are the most prestigious technical awards given at NAB. A panel of independent judges toured the show floor for three days, looking for innovative products and technology. The judges then met to make their selections based on several criteria, including the technical and financial improvements the product can bring to a facility's operation.
