

# ListMaker Playlist & Server Management Software

## ListMaker (FREE DOWNLOAD)

ListMaker provides remote management of Doremi Labs' MCS Server plus extensive playlist creation capability. ListMaker simplifies the management of hundreds of hours of video recordings. It provides individual transport controls for each independent record or play channel. Each new recording can be placed in existing files (clips) or in new files and accessed simultaneously by any play channel.

## ListMakerPL (COST OPTION)

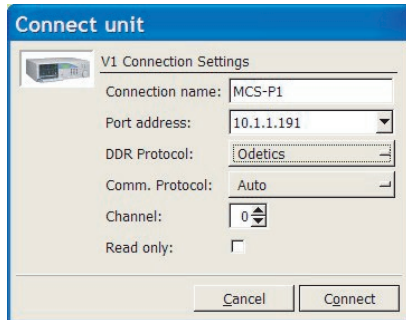

### Play List Operation

Highlights of the video recording, based on time code in & out points, are created within each file. The highlight segments can then be assembled into live-to-air playlists and executed manually or automatically. Changes to the playlists can be made while the playlist is running on-air.

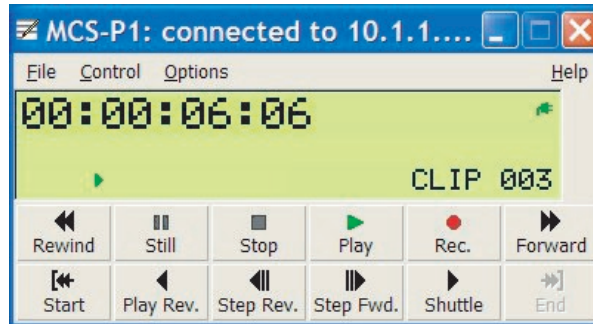

## HIGHLIGHTS

- Playlist playback and automation (COST OPTION)
- Manage and Create on-air play lists
- Ethernet or RS-422 Connection
- Designed for Windows 2000 and XP
- Menu setting control for each channel
- Clips database and menu profiles can be saved to a network shared XML database
- Auto network search for connected servers

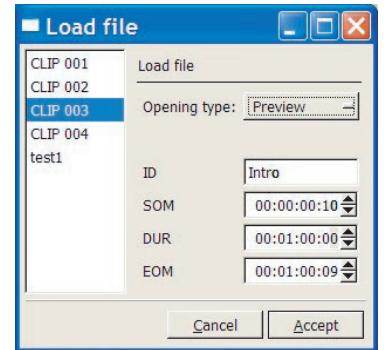

Connect Via Ethernet or RS-422 to each server video channel

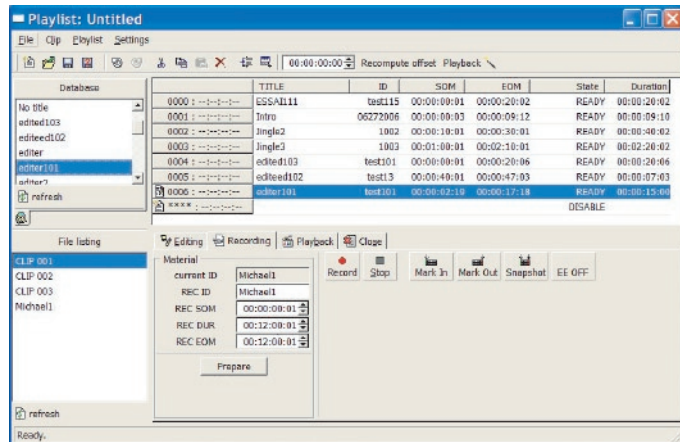

Each video channel can be controlled with a transport window

Create, Delete and load files (clips) for each channel

Create a database of video highlights by creating segments (TC in/out points) within each clip)

Build on-air playlists from your Video Segments database. Execute the playlist in one of four different modes (immediate, manual, absolute time, and relative time from an offset)
